

## Information on Recycled Content

The glass blocks for construction produced by **Seves Glass Block s.r.o.** are made from raw materials for the production of soda-lime glass and recycled glass.

### Information on Recycled Glass:

The proportion of recycled glass in our products is as follows:

- **Pre-consumer recycled content:** 20,3% of the material (cullet - glass) comes from waste generated during the manufacturing process but has never been used by the end consumer.
- **Post-consumer recycled content:** 7,5% of the material (cullet - glass) comes from waste that has already been used by the end consumer and subsequently recycled.

Our commitment to sustainability ensures that we utilize both pre-consumer and post-consumer recycled glass, contributing to a more environmentally friendly production process. By incorporating recycled materials, we reduce the demand for virgin raw materials and minimize our environmental footprint.

This document provides information on the recycled content of our products, supporting our efforts to achieve and maintain LEED (Leadership in Energy and Environmental Design) certification.
